NOTES

Klingon vessel classifications are presently confusing, perhaps by design to prevent their enemies from truly understanding the actual numbers and types of their vessels. In essence, Starfleet has found no logic in determining why a D-12 scoutship has a higher number than their powerful D-7 battlecruisers.

The common "D" nomenclature refers to the Klingon word for ship or vessel, "Duj." A D-1 literally means "ShipType 1" and so forth. Most Klingon ships are a part of the Klingon Defense Fleet. Some freighters appear to serve in the Defense Fleet and some appear to serve in a merchant fleet, yet Starfleet has yet to ascertain how this is determined. Ship registries are more easily determined: I.K.C. is "Imperial Klingon Cruiser" and I.K.S. is "Imperial Klingon Scout." The unusual I.K.M. is "Imperial Klingon Merchant." The rare I.K.T. is "Imperial Klingon Transport."

Further, some of the more advanced Klingon ships have lower numbers than their higher-numbered counterparts. Starfleet has been unable to determine if these vessels have been refit, or if the designs were stolen from the Hur'q invaders which had occupied Kazh, the Klingon homeworld, before being overthrown by the Klingon people centuries ago. What remains clear is that much of Klingon technology was not developed by the Klingons.

Although radically different in design from starships of the United Federation of Planets, Klingon vessels can match their Federation counterparts in speed and weaponry. As the pride of the Klingon Empire battle fleet, their battlecruisers are powerful warships manned by experienced, and, until the mid-2260's, all-male warrior crews. Designed strictly for speed and power, they lack the extensive laboratories and sensor equipment typical of Federation starships. Only the most Spartan living facilities are provided for the crew.

The ship is propelled at sub-light speeds by impulse engines located at the rear of the engineering hull. Starflight capability (faster-than-light speed) is provided by powerful S-2 graf propulsion units located at each wing tip.

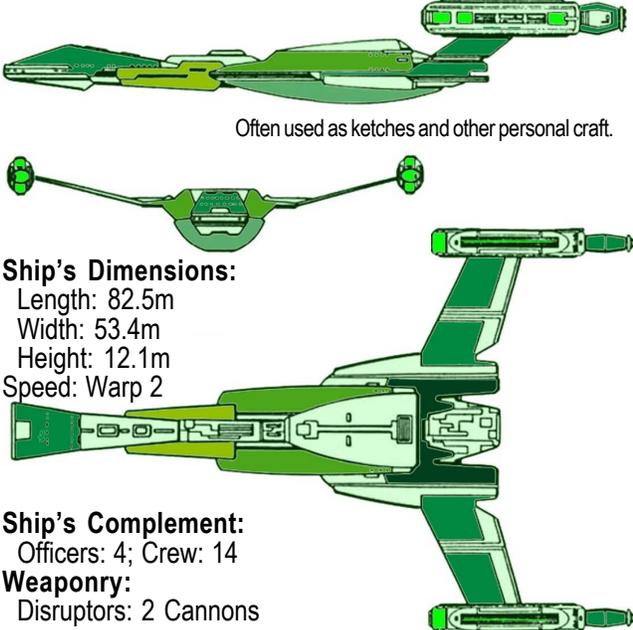

A reconnaissance sensor beam is housed in the forward hull section. It sweeps ahead of the vessel's path to deflect space debris and other objects which could cause damage at hyper-light velocities. Each battle cruiser is fully armed with powerful disruptor-type weapons. Some are also armed with photon torpedoes.

By nature, Klingon society is devoted to personal gain through treachery and deceit. Consequently, their warships operate much as "privateers". Warlike acts are a normal way of life. Klingon vessels are continually testing Federation defenses, probing for an opportunity to strike a devastating blow.

The Klingon D-7 battle cruiser is also used by the Romulan Star Empire as the result of an alliance between the two empires. The Romulans, also a war-like race, are more organized and intelligent than the Klingons. Thus the battle cruiser poses a double threat to the Federation.
